

 ENSPEKT AGENT ACCESS

# Your AI assistant, working in Enspekt.

Claude, ChatGPT, Cursor or any MCP client connects to your organisation and acts as you, within the permissions you tick. No code, no developer, no shared password.

Sign in from Claude.ai, Claude Desktop, Claude Code or ChatGPT

Removals, publishing and grants become proposals you approve

Every change in Configuration history, with undo

# Customise and query in plain language.

Ask your assistant to add a custom field to NCRs, draft an automation rule, build a report, or summarise this month's complaints. It uses the same services your screens use, under your own permissions, and never more.

## Additions apply at once

A new field, option or draft rule lands immediately and can be undone from Settings.

## Risky changes wait for you

Archiving, publishing to live and permission changes arrive as proposals with a verified diff and a second-factor approval.

## Boundaries that hold

HR, payroll and recruitment are never reachable; records read as you, inside your organisation only.

## What's included

Agent Access: one module, everything below

## Per-area permissions

Read the organisation, records and analyses; write custom fields, option lists, automation, approvals, Studio, forms, reports; each ticked separately.

## Hosted and local clients

OAuth sign-in for Claude.ai, Claude Desktop, Claude Code and ChatGPT; a pasted token for Cursor or any client that sends a header.

## Proposals

The agent explains; Enspekt shows the exact diff it verified; an administrator approves with a code and the change is applied as that person.

## Configuration history

Who changed what, as a person, an agent or an approved proposal; undo with a preview.

## Records and analyses

List, read, aggregate and export the business records you can see yourself: NCRs, CAPAs, audits, suppliers, orders and more.

## Support from the agent

Open a ticket with Enspekt, read the conversation, or report a problem the agent met, tagged for triage.

## An audit of every call

Each tool call with its outcome, rows read and timing; argument values stay hashed.

## Kill switches

Revoke a connection, switch the whole organisation off, or let a password change suspend the person's connections until they re-confirm.

## ≡ HOW IT WORKS / 03

# From a sentence to a recorded change.

### Connect

Sign in, tick permissions

### Ask

In your own assistant

### Apply

Additions land at once

### Propose

Risky changes wait

### Approve

Second factor, your name

### Review

History, undo

### Acts as the administrator

Row-level security, module permissions and field permissions apply to the agent exactly as to the person.

### Per-organisation controls

A super admin switches agent access on or off; a cap on live connections; monthly agent actions by plan.

### Short-lived access

Hour-long tokens the client renews, connections that expire, inactivity limits and a circuit breaker for runaway agents.

### Verified, not trusted

A proposal card shows what Enspekt computed from current data first, and the agent's own words second.

### Help Center guide

Step-by-step setup for each client, permissions explained, and what to do when something is refused.

### Your AI provider, your choice

Enspekt never calls a model for you here: the agent is yours, under your own account and your own data agreement with its provider.

BUILT FOR

Organisation admin

Super admin

Quality manager

Operations manager

# Works with the rest of Enspekt.

Everything the agent touches is the same configuration your teams use.

## MANAGEMENT & GOVERNANCE

Custom fields, automation, approval workflows and Studio modules are what the agent builds drafts of.

## QUALITY

NCRs, CAPAs, audits and complaints are among the records it can read and summarise.

## KPI & PERFORMANCE

OEE, on-time delivery, SPC and supplier scorecards come from the same analysis functions as the dashboards.

### ON EVERY ENSPEKT WORKSPACE

 Offline-first field app

 Reports & analytics

 Complete audit trail

 Role & module permissions

 Multi-factor sign-in

 English & Arabic

## See Agent Access in your workflow.

Book a demonstration built around your own processes, or create a workspace and switch the Agent Access bundle on.
